PHD STUDENT

AIM

The main goal of this class today, is to practise some of the “bookkeeping” discussed class and analyse the data you recorded!

(+ coregister the MEG and MRI)

PLAN FOR TODAY

1. Introduction to scripts + argparse
2. Setup scripts directory for your own scripts
3. Taking inspiration from available notebooks on preprocessing work on developing the following scripts
 - 03_filter.py
 - 04_ica.py
 - 05_epochs.py

At the end of the class, we'll have a look at some topographies of evoked responses and discuss what we are seeing!

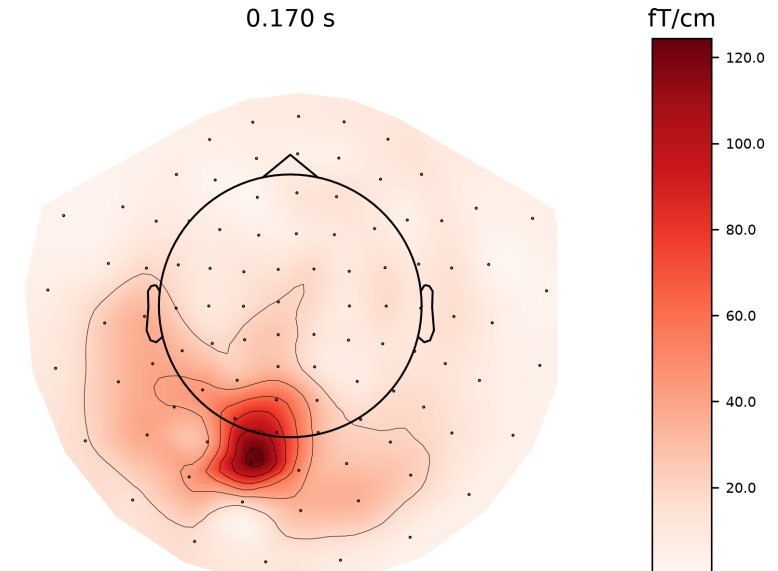

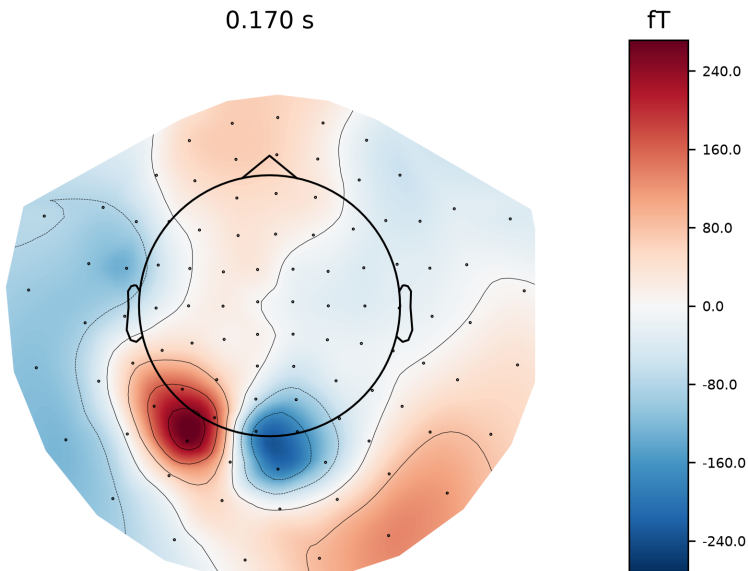

TOPOMAPS (GRAD + MAG)

$$b(t) = L(R) \times S(r, t) + \epsilon(t)$$

What are we plotting from
✨THE EQUATION✨?

TOPOMAPS (GRAD + MAG)

Which plot shows the gradiometers and which plots shows the magnetometers?
